

MAURICE JOHNSON - Senior Software Engineer

904.477.2268 | mauricejohnson3@protonmail.com | <https://trippintheurl.com> | Florida, United States | US Citizen

LinkedIn • <https://www.linkedin.com/in/maurice-johnson-80085/>

Highly accomplished Senior Software Engineer with over two decades of experience, specializing in modern backend development and technologies. Proven expertise in designing, developing, deploying, and maintaining scalable RESTful APIs, Webservices, and Microservices. Adept at leading Cloud First Native initiatives in conjunction to DevOps Principles with respect to generating Robust CI/CD Pipelines, all while driving efficiency through re-usability and automation. Leveraging a deep technical background, I am currently focused on Python Programming Language Certifications and it's varied libraries and frameworks. If only to better equip myself for Artificial Intelligence, LLMs, Deep Learning, Machine Learning, and OpenAPI. Beyond the code, I have been recognized for my technical documentation, collaborative efforts, team mentorship, and resource onboarding best practices.

Skills

- JAVA (7, 8, 11, 17, 21) | PYTHON | SQL | BASH | Powershell | cURL | Groovy (Jenkins DSL)
 - Microsoft VB, C#, .NET – Last Experience – October of 2004
- Package Managers: PIP | WINGET | NPM | Chocolatey
- SpringBoot | SpringFramework | SpringCloud | SpringWeb | Spring JPA | Spring Security | Hibernate
- Microservices | RESTful API | WebServices | JWT | OAuth2 | POSTMAN
- Maven | Gradle | Application Properties | YAML | YML
- Git | GitHub | GitBash | BitBucket
- JSON | XML
- JUNIT | Mockito | PowerMockito | Selenium
- Domain-Driven Design (DDD) | Test-Driven Development (TDD)
- Apache Kafka | RabbitMQ
- Docker | Podman
- IaC:
 - HELM | Terraform | Terraform Cloud Foundry | SpaceLift | CloudFormation
- AWS Web Services (AWS):
 - EKS | ECS | EC2 | S3 | ELB | VPC | SSM | CodeBuild | CodeDeploy | CodePipeline | CodeApplication
 - Security Roles (IAM) | Trust Policies | Permission Policies | Targe Groups | Secrets Manager | ParameterStore
 - Artifactory
 - MSK/Kafka | Kafka Topic | Glue | Glue Schema
 - RDS | PostGres | DynamoDB | Redshift
 - Cognito | ForgeRock | ISTIO Service Mesh | Sidecar (SSO Integration)
- Microsoft Azure:
 - Microsoft Entra ID (SSO) | ForgeRock | Cognito | SSO Integration
 - Jenkins CICD Pipelines | GitHub Actions | Git | GitHub | GitBash
 - JFrog X-Ray (Vulnerability Scanning)
 - SonarCube
- JIRA | Confluence | New Relic (JSON Custom Logging Ingested) | CloudWatch | Splunk | Datadog | Grafana
- Vibe Coding: GitHub Copilot | Prompting | Google Gemini | X AI | Anthropic Claude | Amazon Q
- Environment: Site Reliability Engineering (SRE) | Agile | Waterfall | Mixed
- Operating Systems: Windows | UNIX | LINUX

Experience

Fellowship - AI Model Image | Accuracy | Composition | Technical Trainer

Mar 2026 - Present

Handshake – Contract

- Evaluate and refine multimodal AI model outputs for frontier research labs, focusing on one of the following; image/accuracy/composition/technical rendering.

Senior Software Engineer (Platform & API)

Nov 2022 - Aug 2025

University of Phoenix (UOPX) - Contract to Hire via Insight Global

Nov 2022 - May 2023

- Engineered and maintained Robust AWS CI/CD Pipelines onboarding multiple project teams with respect to third party product, Flowable. Enabled rapid team onboarding and streamlined product upgrades.
- Developed and integrated new AWS EC2 Instances, per project team, for third-party software, Flowable, on AWS EKS, enabling rapid team onboarding for their team's development purposes.
- Automated, Maintained, and Enhanced, both Documentum and Funding Domain RESTful API's, as well as their associative CI/CD AWS EKS Pipelines, all while sunsetting legacy processes to improve service consumption across the infrastructure.
- Led the critical migration POC for Spring Boot 2.x to 3.x and Java 7 to 11/17/21. Demonstrated significant reduction of technical debt and improved system security across project Maven builds.
- Upgraded a RESTful API from Java 7 to OpenJDK 11, which entailed a full upgrade of Spring Framework and Spring Boot.
- Administered and provisioned AWS resources for application projects using Infrastructure as Code (IaC) with Terraform, SpaceLift, and Bitbucket.
- Led a major OpenText Documentum web application upgrade from version 7.2 to 16.7.9, managing the integration of customized components and preparing a CI/CD pipeline for future deployment to AWS or Kubernetes.
- Integrated Microsoft Entra ID (SSO) for multi-tenant environments, managing OAuth2 scopes, permissions, and JWT-based authentication for exposed APIs within the container.
- Implemented platform logging standards using upgraded version of Log4J2, SLF4J, New Relic and JSON formatting, providing real-time structured performance data and reducing mean time to resolution (MTTR). Stood up multiple New Relic Dashboards monitoring microservice throughput, latency, and time variances for consuming applications and or end users.
- Championed reusability and automation by developing repeatable design patterns across all processes, streamlining development workflows, and driving successful project completion.
- Authored comprehensive technical documentation within Atlassian Confluence.
 - Examples Follow:
 - Project 'Lift and Shift' or 'Golden Path' RoadMaps, Third-Party Integration Strategies, Cloud First Architecture Design Patterns, Project CICD AWS Pipelines, Microservice/API Routes and their REQ/RESP Examples, Project READMEs, BitBucket READMEs, NewRelic Dashboards Metrics & Usage, Team Resource Onboarding, Root Cause Analysis (RCA), Troubleshooting Guides.
- Mentored junior engineers, eliminating knowledge silos and accelerating team onboarding during rapid growth phases.
- Proactively researched new technologies and platforms to identify opportunities for automation and workflow optimization.
- Leveraged Amazon Q Developer and GitHub Copilot to accelerate the SDLC; showcased the power of prompt engineering during a corporate hackathon.
 - From the ground up, within 90 minutes, developed a functional, single page, Jira Support Dashboard (filtering production support ticket data by topic/priority).
 - Demonstrated how Google Gemini can generate JAVA Class JUNIT's in real-time.

Senior Software Engineer - Cloud SecDevOps

Mar 2022 - Aug 2022

Kemper – Insight Global - Contract

- Led a high-impact Proof of Concept (PoC) implementing AWS Pod-Level Security Groups, achieving granular network isolation and a hardened security posture for containerized workloads.
- Designed and integrated JFrog X-Ray vulnerability scanning into Jenkins CI/CD pipelines; engineered custom abstractions using Groovy Shared Libraries to automate security gates for Docker images.
- Provided Tier-3 DevOps production support, managing AWS infrastructure (EKS, EC2, VPC, IAM) and

maintaining enterprise Jenkins pipelines to ensure 24/7 system availability.

- Accelerated project onboarding by developing CI/CD Pipeline Boilerplates, reducing manual configuration time for new engineering teams and ensuring governance compliance.
- Authored comprehensive technical documentation within Atlassian Confluence.
 - Examples Follow:
 - Root Cause Analysis (RCA), Third-Party Integration Strategies, PoC & Lesson-Learned, CICD Jenkins Pipelines, Project READMEs, Source Code Repository READMEs, Troubleshooting Guides

Lead Software Engineer

Mar 2019 - Mar 2022

Allstate

- Architected and delivered a high-availability Microsoft Azure Cloud bundled with Jenkins/Groovy Deployment Pipelines managing 52 Docker images across 12 Kubernetes namespaces, automating release cycles for the inhouse Transformative Growth Effort already underway.
- Provided expert-level Database Administration (Oracle PL/SQL & MS SQL Server), leading data modeling, normalization, and conversion efforts to support high-volume microservice transactions.
- Engineered a custom WireMock Framework (Spring Boot/Java) adopted as an enterprise standard to simulate complex API dependencies, increasing developer velocity and reducing environment bottlenecks.
- Spearheaded the integration of ZOS Connect into Allstate's BatchCard Services, successfully bridging mission-critical legacy mainframe systems with a modern RESTful Microservice architecture.
- Directed Proof of Concept (PoC) initiatives for the CI/CD paradigm and implemented the Splunk Monitoring Framework to establish real-time observability across the production environment.
- Served as Technical Lead for one of the company's first "Transformative Growth" initiatives, mentoring cross-functional teams on RESTful API Design Patterns, CI/CD paradigms, and Gradle/Maven best practices.
- Authored comprehensive technical documentation within Atlassian Confluence.
 - Examples Follow:
 - Project Architecture & Design, Project Team Governance Guidelines, Root Cause Analysis (RCA), PoC & Lesson-Learned, Jenkins CICD Pipelines, Microservice/API Routes and their REQ/RESP Examples, Project READMEs, Source Code Repository READMEs, Troubleshooting Guides, Slack Dashboards Metrics & Usage

Senior Software Engineer

May 2018 - Mar 2019

Leidos - Collabera - Contract

- Engineered a Greenfield JavaFX/Java Application mission-critical Live Fire Weapons Assessment desktop application, from the ground up, for the Government of Egypt (GoE); successfully translated complex Statements of Work (SOW) into a high-performance functional application.
- Designed and implemented a secure Model-View-Controller (MVC) framework using JavaFX, creating robust CRUD interfaces and data-binding layers to meet rigorous international client specifications.
- Integrated a RabbitMQ Interface Service Handler to establish a decoupled, asynchronous communication layer, ensuring reliable data delivery for specialized real-time assessment functionality.
- Standardized development workflows by enforcing Google Development Standards and OOD/OOP principles, utilizing IntelliJ-driven quality gates to ensure long-term maintainability.
- Led peer code reviews and introduced Usability Metrics, shifting the team's focus toward user-centric design and reducing post-delivery UI/UX defects.

Senior Software Engineer

Oct 2017 - Apr 2018

Lockheed Martin - Apex Systems - Contract

- Engineered core enhancements for the F-35 Autonomic Logistics Information System (ALIS), a global CMMS platform managing maintenance and logistics for the Department of Defense's premier fighter jet program.
- Integrated features for Inventory, Bill of Materials (BOM), and Unit Maintenance History modules, ensuring 100% accuracy in tracking mission-critical defense fighter plane assets and assembly lifecycles.
- Leveraged Java, JavaScript, jQuery, and JSP on a WebSphere Platform.
- Acted as a Subject Matter Expert (SME) to meet SLA and provide on-call support to those in the field, bridging the communication gap between field personnel and engineering teams, all to resolve surmounting backlog issues.

Senior Backend Engineer

Jan 2017 - Sep 2017

OneMain Financial – Contract

- Architected and deployed 24/7 JAVA APIs and Web Services for the Personal Loans division, enabling real-time data analytics for automotive repossession and risk mitigation workflows. Built on top of Spring, Spring Boot, JAVA, and the traditional MVC Design Pattern.
- Managed core services governing eSignature and Mobius Document Handling, ensuring the compliant execution and
- digital archival of high-volume loan contracts.
- Enhanced legacy business process flows by implementing modern Spring Boot and Jersey frameworks, improving system response times for critical asset recovery reporting.
- Spearheaded comprehensive unit and regression testing strategies using SOAP UI and JUnit, delivering documented test plans that satisfied strict financial auditing requirements.
- Optimized complex data exchanges between DB2, SQL Server, and MQ messaging layers, facilitating seamless data flow across the lending department's distributed architecture.

Senior Software Engineer

Apr 2015 - Aug 2016

Heritage Services

- Spearheaded the transition from proprietary GIS software to Open Source technologies (Leaflet, OpenStreetMap), successfully reducing enterprise licensing costs and standardizing development conventions.
- Architected and deployed a GeoMapping enhancement that integrated customer and supplier datasets to identify untapped marketing opportunities, directly contributing to organizational sales growth.
- Refined transportation and routing logic within the core Waste Management Web Application, resulting in measurable reductions in operational overhead and improved service delivery metrics.
- Developed robust batch processing systems for multi-interval (monthly/quarterly/yearly) financial reporting, ensuring precise benefit calculations for Green Alternative Renewable Industry programs.
- Leveraged Java, JavaScript (jQuery/Bootstrap), and Oracle PL/SQL to deliver end-to-end features in a high-availability environment, maintaining strict data integrity for client financials.

Certifications

Coursiv – AI Master Program

ChatGPT | Claude | Myjourney | Lovable | Gemini | Jasper AI
Stable Diffusion | DeepSeek | Veo | Perplexity | Kling

OPENEDG – Python Institute - Python Essentials 2 (PCEP-31-03)

OPENEDG – Python Institute - Python Essentials 1 (PCEP-30-02)

Education

Bachelor of Science: Computer Science • Indiana State University • Terre Haute, IN

Bachelor of Science: Mechanical Engineering • Southern Illinois University • Carbondale, IL

Awards

Eagle Scout: Boy Scouts of America • Paris, IL
