Developer Workstation - Configuring your Yarn Project

Scope of Page: (Currently in DRAFT Form and should be considered a fluid document)

To provide any given developer the necessary steps to stand up their Developer Workstation for this effort.

Steps	Instructions	Description / Comments
1	***Before we Begin...***	Before we begin, please make certain to review and configure your LOCAL Developer Machine according to the following instr Configuring Your Eclipse IDE It contains both "**NodeJS**" and "**npm**" Installation and Configurations that are a basis for the vendor Client-side "**Yarn**" Projects
2	Download the Genesis UI Module from Vendor FTP Site	**FTP Site:** https://ftp.eisgroup.com/FTP/allstate/upload/v20/ **UID:** allstate **PWD:** cP3f0zk+1C 3	Unzip Yarn Module into your Application Workspace	Here I created a Workspace Folder Structure "C:\workspace_eis-ui-genesis" and upzipped the downloaded archive file as sho 
4	Install '**Yarn**'	Using our Node Package Manager (***npm***), open a Command Line Window, as an "Administrator" or "Run with Elevated Right "**npm install --global yarn**" Seeing that we configured our NPM to point at our Company's Artifactory; which has been configured to point at the V download the Vendor's Version of '**Yarn**'
5	Navigate to the Module "**package.json**" file	This can be found at the following folder structure (C:\workspace_eis-ui-genesis\ab-eis-ui-genesis\prototypes\applications); 6	Edit the "**package.json**" file "Engines" Section and Save it.	Presently I have updated my package.json File to the following Engine Versions. This will be dependent upon the Vendor's Version of Yarn and the Version of NodeJS that was downloaded and configured. As of this date, 17 Jun 2021 the **NodeJS** Version is **14.15.0**, which comes delivered with **npm** Version **6.14.8** and the current **1.22.10** *"engines": {* *"npm": ">=6.14.8",* *"yarn": ">=1.22.5"* *}* 23 Jun 2021 - just noticed this morning, that the 'Yarn Version' may fluctuate. I say this because in between last Thur 1.22.5 from 1.22.10. Just an FYI...
7	29 Jun 2021 - New Step Added *If this is not your first build perform the following steps. If this is your first build you may Skip this Step.*	***Execute the Following at the Command Line within your project WorkSpace:*** 1. yarn cache clean 2. npm cache clean --force **Either Execute the following at the Command Line OR navigate to your Workspace Root Folder Structure within a Fol** 1. Delete the package-lock.json file 2. Delete the Node Modules

		As of 29 Jun 2021 Steps **#8** and **#9** have replaced a prior step that relied heavily on the following technologies; "Choc Builder". Initially we were using them to devise the Project Dependencies and their sub-dependencies; however Allsta Violations; in which we turned to "Electron-Builder". Unfortunately "Electron-Builder" was found to be terribly slow, wh Project Dependencies. Which as you might surmise is the long-term intended direction. so we had to devise the proj https://chocolatey.org/ https://www.npmjs.com/package/electron https://www.electron.build/ 30 Jun 2021 - 'Electron' will be PEAPED to increase build times and efficiency. Once successfully PEAPED, all the re and **#9** with the following and execute at the command line: ***"npm install --save --no-audit electron"*** ***"npm install --save --no-audit electron-builder"***
8	Update/Add Project Dependencies - StoryBook - Dependency	*Using our '**npm**' Package Manager, open a Command Line Window, if not already performed, as an "Administrator" or "Run w* ***Following at the Command Line within your project WorkSpace:*** 1. npm install --save --no-audit semver@^6.0.0 ***NOTE***: There seems to be different version requirements of the "**semver**". Food for thought. 2. npm install --save --no-audit vue 3. npm install --save-dev --no-audit vue-loader vue-template-compiler @babel/core babel-loader babel-preset-vue 4. npm install --save-dev --no-audit @babel/helper-create-class-features-plugin 5. npm install --save-dev --no-audit @storybook/vue

9	Update/Add Project Dependencies	*Using our '**npm**' Package Manager, open a Command Line Window, if not already performed, as an "Administrator" or "Run w* ***Following at the Command Line within your project WorkSpace:*** As of this date, 30 Jun 2021 one of the ongoing issue that has been faced is a Dependency Scope Issue. I will elabor reader may notice the use of the '@' symbol. This dictates the "Scope" of the Dependency. Cross Referencing this a and that of the "**.npmrc**" file will dictate where the dependency should be pulled from. Whether it is the EIS **Nexus** Ve Repository, or that of "**NPM**"'s repository; which as luck would have it, most types may be found. Upon occasion an a repository which results in the build ERRORING OUT. Continuing to work the issue to resolve. 1. ~~npm install --save --no-audit --registry https://artifactory.allstate.com:443/artifactory/api/npm/eis-allstate-npm/ @types/inputm~~ 2. npm install --save --no-audit object-visit 3. npm install --save --no-audit string-convert 4. npm install --save --no-audit is-set 5. npm install --save --no-audit find-up 6. npm install --save --no-audit @types/unist 7. npm install --save --no-audit babel-plugin-minify-type-constructors 8. npm install --save --no-audit @ant-design/icons 9. ~~npm install --save --no-audit --registry https://artifactory.allstate.com:443/artifactory/api/npm/eis-allstate-npm/ @types/data.c~~ 10. npm install --save --no-audit regenerator-runtime 11. npm install --save --no-audit @nodelib/fs.walk 12. npm install --save --no-audit libphonenumber-js 13. npm install --save --no-audit styled-components 14. npm install --save --no-audit kind-of 15. npm install --save --no-audit strip-ansi 16. npm install --save --no-audit safe-buffer 17. npm install --save --no-audit prop-types@^15.5.9 18. npm install --save --no-audit shallow-equal@^1.0.0 19. npm install --save --no-audit json2mq@^0.2.0 20. npm install --save --no-audit hammerjs@^2.0.8 21. npm install --save --no-audit @babel/types
10	Execute the **Y arn** Install Command	Using our Yarn Package Manager, open a Command Line Window, if not already performed, as an "Administrator" or "Run wi following command; "**yarn install --verbose**" This will Map, Resolve, and Copy/Download the remaining Project Dependencies to your LOCAL Machine Project Wo *Please Note:* You may periodically experience Network Issues as shown below... `info There appears to be trouble with your network connection. Retrying...`

11	Execute the **Yarn** Start Command	Using our Yarn Package Manager, open a Command Line Window, if not already performed, as an "Administrator" or "Run wi following command; "**yarn start**" This will compile/build the project and all of its dependencies. This will also kick off a LOCAL **WebPack** Server Instan If all goes well, your **Client-side Yarn** Application should NOW be available at the following URL: http://localhost:300 12	Congrats.... You have successfully spun up your first Yarn Project
